

## Wiki Activity: Questionnaires:

The questionnaire is: <https://sileo.com/wp-content/uploads/Sileo-Cyber-Threat-Questionnaire-Sample.pdf>

This Cyber Threat Questionnaire is a self-assessment that is designed to help you understand your strengths and weaknesses and potential information technology risks across three dimensions:

- Management & Oversight: Implementing and operating a comprehensive security management framework that ensures the effectiveness of information security controls and safeguards to protect critical assets.
- Physical Security: Denying unauthorized access to facilities, equipment and resources and protecting personnel and property from damage or harm.
- Logical Security: Identifying, authenticating and authorizing user access to computer information systems by enforcing rules for systems, programs, processes and information.

The design of this questionnaire is good and easy to follow but there are some questions are hard to understand and the questionnaire is very long and will takes long time to be completed so from my point of view, several respondents could not fully complete it. However the questionnaire should have less number of questions and some questions need to be re-sentence so that more respondents can follow.
