e-Portfolio Activity: Research Proposal Review

Considering your thoughts on your chosen area of interest for your project:

- Which of the methods described in this week's reading would you think would suit your purpose?

To cover the cybersecurity in cloud computing, the study will use descriptive research to discuss and find the future security level for the financial institutions migrating to the cloud. Also, the study will examine the risk of cloud computing internet connectivity and how companies could have more control over the infrastructure. Finally, the study will explain companies should choose between cloud computing types and services, including all cybersecurity tools, monitoring and logs.

- Which data collection methods would you consider using?

Quantitative research will be used to collect the data as it is the best one to use with technical analysis, including the required tools and techniques like experiments, case studies and surveys.
